*Press release for immediate release*

Escaldes-Engordany, Principality of Andorra, 26th April 2018

The beginning of the end of the bank cards fraudulent use with EVITAG NFC and NFC EVICARD cyber features

On April 24th 2018, solutions EVICARD NFC and EVITAG NFC users received an amazing update, the addition of a security service for bank cards. It seems that this solution deletes many risks, including payment cards information theft in the online sales databases and fraudulent use of the security code (CVV) of these cards.

27 billion euros[1] that will be the total amount of fraud with payment cards around the world in 2020**!** The bank data theft and credit cards theft are global issues. I intend to uberize cybersecurity bank cards and internet uses and mark the beginning of the end of fraudulent uses, says the French inventor Jacques Gascuel.

The product he invented saves, with encryption, the credit card information in a sealed device, tamperproof, always available. Simple to use, it works with an NFC Android smartphone and the free plugin NFC EVILOCK for Chrome or Mozilla. The solution is available in the "credit card" or "tag" size.

Today, EVITAG NFC and EVICARD NFC solutions do not make payments, but secure them end to end. The cryptogram of the card is stored in these electronic safes, which allows the physically erased from the card. No more risk of fraudulent use in case of loss or theft! The information in your credit card will not be stored in the online sales sites databases. They will be in your pocket or wallet.

If you forget your credit card when traveling, especially abroad, you can still perform many of purchase of goods and services through these solutions.

No risk in case of loss or theft of an NFC EVITAG or EVICARD NFC, there is no physical way to access the contents of the encrypted memory. It is highly recommended to make a backup on a similar product and keep it safe.

A Bug Bounty event, demonstrations and prototypes presentation of new services will be held at "Rencontres Cybersécurité d'Occitanie[2]"on May 29th 2018 in Toulouse (France) adds Jacques Gascuel. Rewards will be awarded to potential winners: EVICARD NFC and EVITAG NFC, entrance for 2 people at Caldea in Andorra. (https://www.caldea.com/fr)

Fullsecure is an Andorran start-up specializing in the distribution of patented Cybersecurity solutions.
